

# ENTRA AZURE MARKETPLACE GUIDE

## Registering the nShift Application

April, 2024

*Important Note:* nShift Entra Gallery Application requires the following Permissions: *openid* and *profile*. You may need to grant admin consent for them while performing the setup.

## Step 1: Getting an nShift Portal user

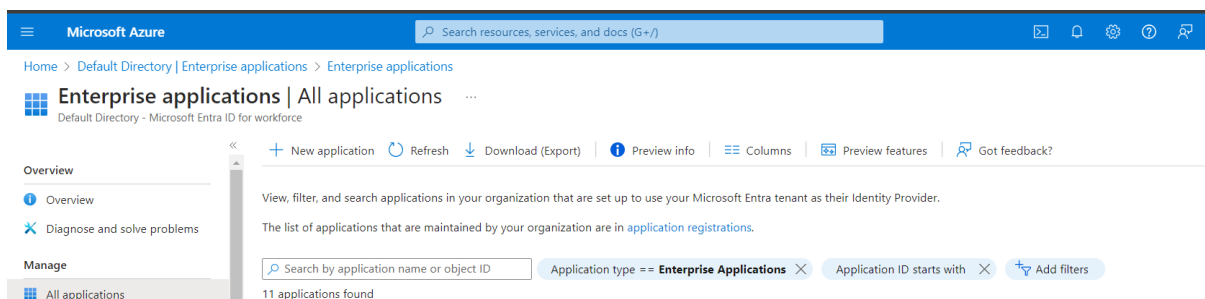

The customer's Entra Administrator (the user performing the nShift Application registration) will need an nShift portal user.

Contact nShift Support and request a user to be created for your Entra Administrator, by sharing the Entra Administrator's username and your Microsoft Entra Tenant ID

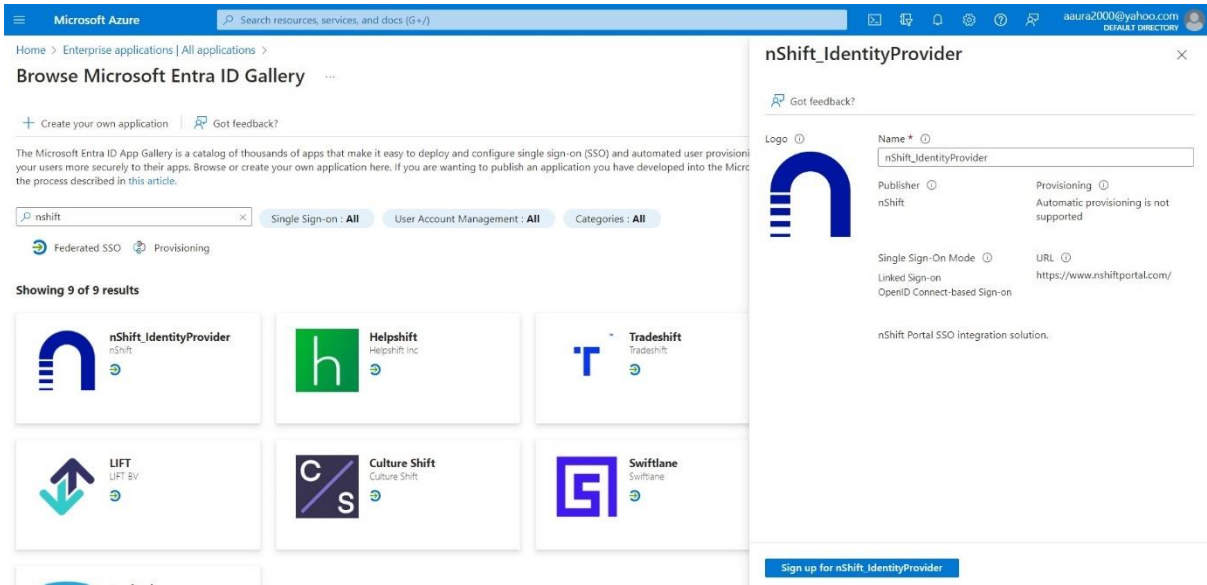

nShift will provide the nShift-Portal username (already having the required SSO setup). This use will be used while performing Step 2.

## Step 2: Register nShift Application

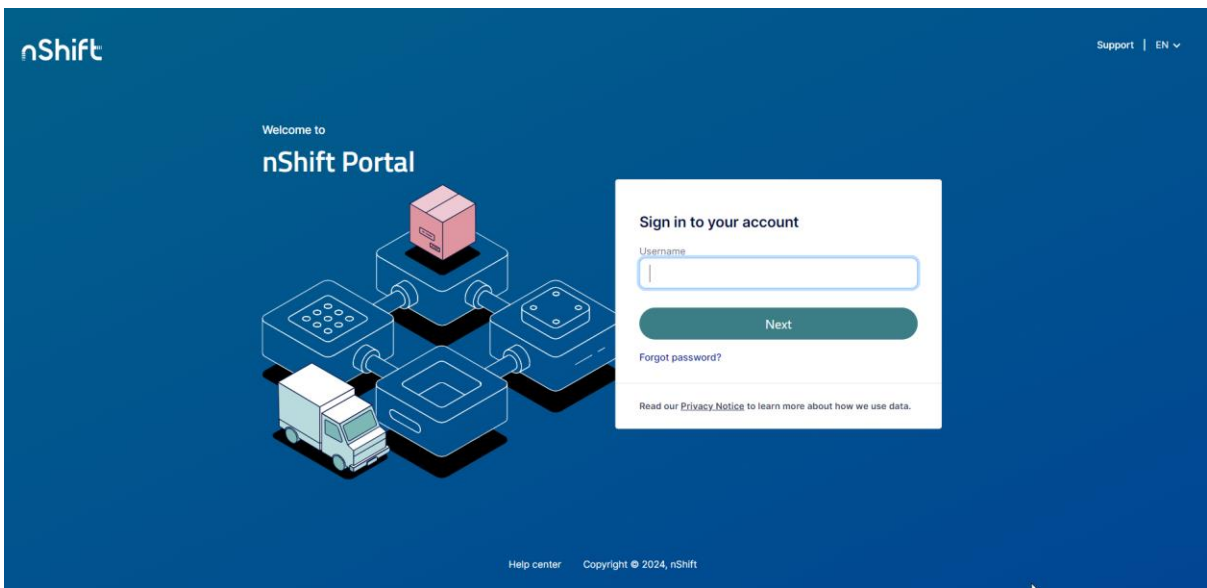

Go to **Microsoft Azure** -> **Enterprise applications** and click **"New application"**.

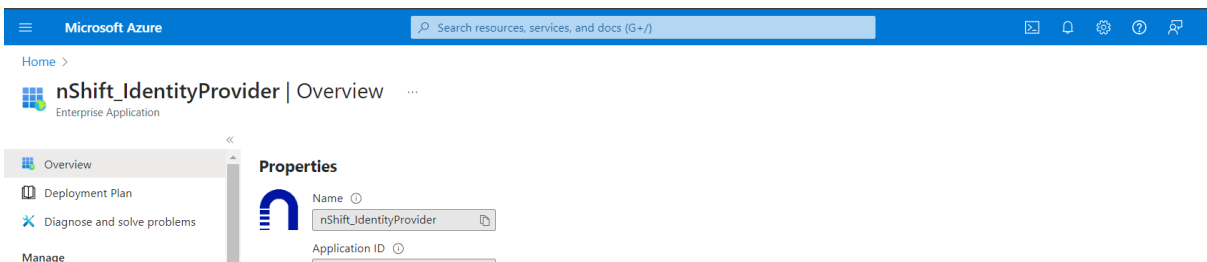

You will be redirected to the Microsoft Entra Gallery. Here search for nShift and **nShift\_IdentityProvider** should be among the first results. Proceed by clicking on the **"Sign up for nShift\_IdentityProvider"**.

You will be redirected to the nShift Portal login page. Here enter the credentials (nShift-Portal username) previously provided by nShift and follow the instructions.

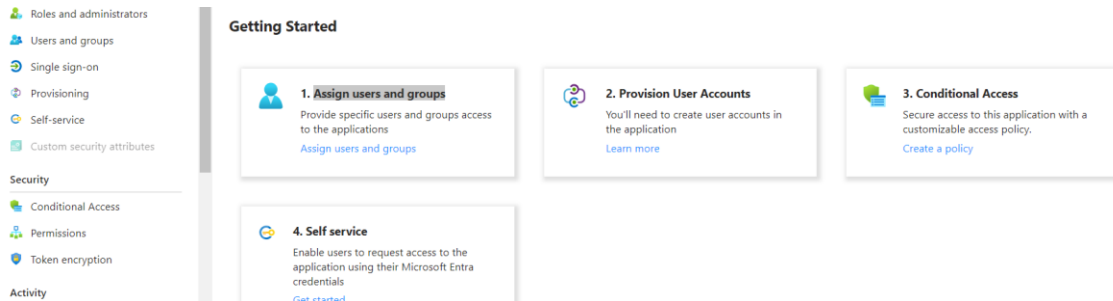

After a successful login the nShift Entra Gallery App should be added to your list of Enterprise Applications.

## Step 3: Configure Entra User access

Customer should configure their Entra Users to have access to the Entra nShift Application

Make the necessary changes within **Assign users and groups**.

*\*)Important note:* nShift does not support User Provisioning at this time. All of the customer's users who wish to access nShift-Portal will have to be created within nShift-Portal.

## Step 4: Additional setup for nShift-Portal users

In case the first user created to add the registration is not the main user (owner) for the nShift-Portal customer's account, nShift can provide support to make the necessary changes.
